

## Maintenance solutions for electronics production

Following its successful premiere at automatica 2018, the Smart Maintenance Pavilion will be held this year at productronica. The special show demonstrates the growing importance of maintenance through the digitalization of production processes. An exciting mix of innovative products and solutions from renowned exhibitors, valuable expert knowledge and practice-oriented product presentations offers visitors a unique platform for exchanging information and opinions.

Maintenance becomes the backbone of Factory 4.0. In the course of Industry 4.0, the associated networking of plants, products and materials as well as the digitalization of information and control through IT-based systems, the scope of tasks and responsibility of maintenance is growing. Ensuring almost 100 percent availability for highly flexible production systems is one of the major future challenges for maintenance.

### Meet the Experts – Know How from specialists

Electronics manufacturing places high demands on plant availability and safety, scalability and quality control. The integration of the topic of maintenance on the way to Smart Maintenance is therefore an important addition. The Smart Maintenance Pavilion is an innovative event format tailored to the needs of participants. It offers a compact overview of current and future applications, solutions and products for efficient maintenance and is therefore a tailor-made platform for exchanging ideas with proven experts, experiencing concrete maintenance processes in practice and learning from the experiences of other users.

### Practical knowledge with an experience factor

By linking the content of applications (Demo Park Maintenance), guided tours and the "Meet the Experts" workshops, trade visitors will experience a compact mix of information, practical examples and field reports.

### The range of topics at the Smart Maintenance Pavilion:

### Save the date

productronica | World's Leading Trade Fair for  
Electronics Development and Production

Date: Nov 12 - 15, 2019

Predictive Maintenance - Condition Monitoring - TPM (Total Productive Maintenance) - Asset Management - Data Analytics - Mobile Maintenance - Computerized Maintenance Management Systems (CMMS) - Remote Services - Industrie-Services - After-Sales-Services - Tribology - Thermography - Augmented Reality - Retrofitting - Inspection and Maintenance - Maintenance Concepts and Methods - Consulting

### Your advantages as an exhibitor at the pavilion:

- ✓ The Smart Maintenance Pavilion is the place where interested trade visitors can specifically search for you and your solutions
- ✓ Here you address your target audience without scatter loss
- ✓ Your company, your product and your consulting are found in a clearly defined, thematic environment
- ✓ Full service package with clearly calculated time and cost expenditure: Just select your suitable module. And then concentrate only on the essentials: Your customers
- ✓ Present your solutions additionally live in the Demo-Park
- ✓ Use the "Meet the Experts Lounge" for in-depth company workshops or customer events
- ✓ In the lounge area you can meet visitors and exhibitors to discuss refreshing drinks and snacks, find out about their customers' needs and discuss solutions
